# **THROUGH HARDENED BULLDOZER CUTTING EDGES**

**Through hardened MT2 steel assures** that bulldozer edges provide the **greatest possible strenght** and the **maximum wear resistance**.

**Edges are available in one, two, three and four - piece sections** for easier handling, storage, installation and turning; are also available edges for **Finishing Dozing (FD)**, for **General Duty (GD)** and **Wider (GD Wider)**. In addition to that, cutting edges with different thicknesses like **Heavy Duty ( HD )**, **Extra Heavy Duty (Extra H.D.)** and even **Twice Extra Heavy Duty (Twice Ex. HD.)** can be chosen.

They suit six different blade models: **Straight (S)**, **Universal (U)**, **Semi-U (SU)**, **Cushion (C)**, **Angle (A)**, **Power Angle and Tilt (PAT)**.

**The maintenance time is reduced** as well and since pieces can be replaced, switched and turned individually, **users can save money by getting the maximum wear life from each piece**.

In highly abrasive applications, **for D8 and bigger Bulldozers**, are available **Extended Wear Life (EWL) System Cutting Edges** made from **MT2 and MT3 steel**.

**They are wider** (from 2.75" to 3.00") than the other standard type edges, and **have offset bolt holes**. It is suggested to install them with the long side down.

**In extremely severe applications** the through hardened edges are made from **MT3 steel which increases considerably wear life** by reducing the tempering effect and its higher cost is more than compensated by the longer life: **EWL edges**, used together with **EWL end bits**, as a system, can increase system wear life 80% or more.

## **TECHNICAL INFORMATION**

		<b>MT2 Steel</b>	<b>MT3 Steel</b>
<b>Material Specification</b>		30MnCrB5H	26MnCrNiMoB4.4.3
<b>Mechanical Properties</b>			
Surface Hardness	HB	460÷520	440÷550

C O M P O N E N T S**

# **THROUGH HARDENED BULLDOZER END BITS**

**They are through hardened** for maximum wear life and they are **made from MT2 and MT3 steel** to achieve wear life match with edges.

The **thickness** in wear area is designed to produce a **favourable end bit-to-cutting edge wear ratio** and the side extension, being beyond the sidebar, protects the moldboard.

**Five main options are available**, with specific characteristics, having common features which help **to increase production and to decrease operating costs**.

**FINISHING DOZING (FD)** - They have the **same width as the cutting edges** and are **recommended for finish and semi-finish dozing**. They are made from MT2 rolled and through hardened steel.

**UTILITY ( UT )** - they are recommended in **applications where face-wear is a problem** or where initial price is the main purchase criterion. They are made from MT2 rolled and through hardened steel.

**GENERAL DUTY ( GD )** - They have a **non-uniformity in thickness**, in fact, they have the **same thickness in the bolting area as the bolted aside cutting edge** and **thicker in wear-area** that extends beyond the support.

They are very well suited to **most dozing applications**. The execution is hot forged and they are made from through hardened MT2 steel.

**ABRASION / IMPACT or HOT CUPPED ( HC )** - They are used where both **penetration and wear** resistance are **needed** such as dozing clay, loam, silt, sand and gravel. They are featured for a **18° angle for a better penetration**. The execution is hot Cupped and they are made from through hardened MT2 or **MT3 ( on request ) steel**.

**EXTENDED WEAR LIFE ( EWL )** - They have a **non-uniformity in thickness**. Like for the GD end bits, they have **same thickness in bolting area as the bolted aside cutting edges**, but they are **thicker and wider in wear-area**. The additional wear material provides the **same durability of the end bit and of the cutting edge**, therefore, a perfect ratio between the two parts.

The execution is hot bended and they are made from through hardened MT2 or **MT3 steel**.

Title	Dozer angle iron
-------	------------------

**Angle iron for finishing**

**Anti-abrasive angle iron for impact**

**Angle iron For general usage**

**Angle iron for finishing:** they are recommended for light use, they have the same excavation depth of the cutting edge and protect the blade angle from impact with slightly abrasive material. They are recommended for levelling work.

**Anti-abrasive angle iron for impact:** they are foreseen for use in particularly abrasive operations. Like clay, peat, lime, sand and gravel excavating. They are characterised by an angle of 18° to obtain a better penetration. Hot drawn and forged in tempered steel for greater protection against wear.

**Angle iron for general use:** the step profile has the same thickness of the cutting edge at the perforated area, and is thicker in the area exposed to wear which extends beyond the support. These angle irons are suitable for almost all applications

# CATERPILLAR-DOZERS & SCRAPERS

Applications

**T O U G H  
C O M P O N E N T S**

## Dozing Blades

Our parts are not original but they are interchangeable with them. The O.E.M. Part Numbers are give for reference purposes only.

# CATERPILLAR-DOZERS & SCRAPERS

## Dozing Blade Types

**T O U G H  
C O M P O N E N T S**

**Straight (S)** Blade is a good general purpose blade for most dozing applications.

**Semi-U (SU)** Blade is basically a straight blade with small wings to provide a blade with better load carrying characteristics. Available for D5 and larger models.

**Power Angling and Tilt (P or PAT)** Blade is the most versatile blade. Available for D6 and smaller models.

**Universal (U)** Blade is designed with large "wings" to more efficiently carry large loads over long distances.

Available only for D7 and larger models.

**Cushion (C)** Blade is a relatively narrow blade designed primarily for pushing scrapers.

**Angle (A)** Blade is an economical, light to medium duty blade designed for use on D8 and smaller machines where the ability to side-cast is desired.

# CATERPILLAR-DOZERS & SCRAPERS

## Applications

**T O U G H  
C O M P O N E N T S**

**Stinger Arrangement** This combination is standard for most scraper applications. It provides good penetration and efficient flow of material into the bowl.  
Optional configurations with AFM cutting edges.

**Standard Router Bits** Are available for all models and are recommended for most applications.

**Level Cut Arrangement** Used for finish work or very high impact loading where stinger breakage is a problem.  
Optional configurations with AFM cutting edges.

**AFM Router Bits** Are available for all models. They are for use in high abrasion low-impact applications.

**Integrated Tooth Design** For improved penetration in more severe applications.

Our parts are not original but they are interchangeable with them. The O.E.M. Part Numbers are give for reference purposes only.
